

USING PROWOOD® FR FOR SILL PLATE APPLICATIONS.

ProWood® FR is a pressure treated interior fire retardant lumber (ICC-ES ESR-4373 & UL FR-S). The product end use must be in areas that are not exposed to the weather or wetting, but may be exposed to dampness where the code permits the use of wood or fire-retardant-treated wood.

ProWood® FR fire-retardant-treated wood can be used in direct contact with masonry or concrete for end use applications such as sill plates, blocking or furring strips to name a few examples so long as the application is interior within a building envelope. Product used in direct contact with a concrete floor cannot be used in areas which are subject to excessive wetting, washing down or flooding. It is recommended to always check with the appropriate regulatory authorities for job-specific criteria and approvals.
